

1. What kind of website would you like to build? What kind of mobile app would you like to build?

I would like to build a blog site where people can make their own blog sites. This might be a little too ambitious, but I still think I want to try making one. For mobile app, I would like to make a calculator.

2. Who would your targeted audience be for the website?

People who want to get their ideas out there and express themselves in the format of writing.

3. How have you created web sites in the past? Examples – IMM 120 projects, personal websites, websites for other people. Provide details on the topic, how many pages, what kind of navigation, if it was responsive... etc.

I made a pizza delivery site that pages like a main page, a page dedicated to menu items, and how to create an order online.

4. Who would your targeted audience be for the mobile app?

People who don't have calculator with them and need one to do some quick math.

5. How have you created mobile applications in the past? eg – MIT App Inventor, native iOS app, native Android app, etc. Provide details on the topic, how many screens in the mobile app and their functions, what kind of navigation... etc.

I don't think I've made a mobile app in the past, but a lot of my webpages were compatible with phones. For example, [this site \(Links to an external site.\)](#) has the user moving images around to make a picture and works well with phones.
